Time Interval (Δt)
SYSTEM PARAMETERS AND CONFIGURATION
Physical Constants:
• Photon-cavity coupling (γ): 15.000000 rad/time
• Inverse pulse width (σ): 1.000000 1/time
• Dispersive coupling (χ): 7.500000 rad/time
Noise Configuration:
• Relaxation (γ_relax): 0.000000 rad/time
• Dephasing (γ_deph): 0.000000 rad/time
• Depolarizing (γ_depol): 0.000000 rad/time
Measurement Protocol:
• Initial time: -5.000000 | Final time: 5.000000
• Total evolution: 10.000000
• Batch size: 1 realizations
• Computation mode: discrete
Landscape Statistics:
• Contrast range: [0.000000, 0.911527] | Variation: 9.12e-01
• Optimal interval: 10.000000 | N_measurements: 2 | Contrast: 0.91152709
• Interval range: [0.200000, 10.000000]
